
Investigative Committee of Russia presents new dossiers in the project “Ukraine. Chronicle of Fiery Years”

Investigators of the Investigative Committee of Russia continue collecting evidence of crimes of the Ukrainian military in Donbass. They are registering all cases of use of indiscriminate heavy weapons against civil infrastructure objects. They are also establishing the involvement of certain Ukrainian servicemen in artillery attacks on residential quarters, schools, hospitals, civilians, journalists, and international missions' personnel. The trial of Ukrainian military waging a war against their own people must take place. Evidence that is being collected by investigators of the Investigative Committee of Russia will become a foundation of charges against those committing crimes against helpless civilians, those who are at present called “heroes” in Ukraine.

In the project “Ukraine. Chronicle of Fiery Years”, we share with the audience a part of the collected evidence and introduce people involved in attacks on civilian persons.
