

«Forensics Wonders»: traces invisible to the eye

Today experts of the Investigative Committee of Russia are equipped with advanced technologies and equipment and detection of traces and personal identification for them is only a matter of time. During the last 4 years, the laboratory of the Investigative Committee of Russia identified approximately 200 previously unidentified bodies. Experts have helped to bring to justice over 1,300 perpetrators who had been hiding from investigators for years.

What part does genetics play in investigation? How to detect biological traces, invisible to the human eye? Watch the [next series of a program «Forensics Wonders» about these and many other issues.](#)
