## **Investigators believe that discharge water from Neberdzhayevskoye Reservoir could not have led to floods in Krymsk district of Krasnodar Territory**

The Krasnodar Territory investigating bodies of the Russia's Investigative Committee do not consider discharge water from Neberdzhayevsk reservoir as a cause of floods in the Krymsk district.

It has been preliminarily found that discharge water was carried out normally. There was no overflow over the dam. Normal mode provides for periodic small discharges of water, it has been found that this discharges had not influenced the emergency situation. There were no mass discharges of water or overflows over the dam.

Investigators believe that discharge water could not have led to floods.
